

Hydraulic Artist Bench Repair Instructions

- Check all rubber hoses
If hoses need replacing, they are surgical tubing wrapped with nylon
If you cannot purchase locally, Jansen will supply correct tubing
- Remove valve core with a valve-core remover
If you don't have a valve-core remover, purchase at local auto parts store for about \$1.00
- Turn bench right-side-up to drain any fluid which might be in tank
- Put in 10 oz. liquid
Mix 8 oz. tap water (not distilled) plus 2 oz. Prestone (or other radiator anti-freeze) as rust inhibitor
- Replace valve core
- Very slowly pressurize to 55 psi
Use a bicycle pump, not a high-pressure air pump
- Install valve stem cap
- Operate lift system
It may take 3 or 4 attempts for everything to begin circulating and moving again
